                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAA38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathys and central nervous system diseases, such as

                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence represents a CIDE (Cell death inducing DFF45-like effector) consensus sequence, thought to be involved in apoptosis and programmed cell death. Human HLYAL47 polypeptides (a CIDE B protein) and polynucleotides are useful in the treatment of cancer, haematological disorders, e.g., bone marrow failure including myelodysplastic syndromes, aplastic anaemia, neutropaenia and leukaemia, cardiovascular diseases (e.g. ischaemia and reparrusion), liver diseases, inflammation and neurodegenerative pathologies. These may also be used as research reagents and materials for the discovery of treatments and diagnostics for animal and human diseases, for chromosome identification, as immunogens to produce HLYAL47 specific antibodies, and in screening for (ant)agonists of the HLYAL47 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New HIYAL47 polypeptides and polynucleotides, useful for treating cancer, hematological disorders, bone marrow failure such as myelodysplastic syndromes, aplastic anemia, neutropenia and leukemia,

                                                                                                                                                                                                                                                                                                                                          polymerase chain reaction (PCR) primers, oligomers, and for chromosome cand gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome cand gene mapping, and in recombinant production of (II). The polymerase chain reactivity of an diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving constitution (II) is useful for generating antibodies against it, detecting or quantitating a polymeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical consisting of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polymeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations consisted and produce other types of data and products dependent on DNA and anino acid sequences. ABG00010-ABG30377 represent novel human

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
                                                                                41
                                                                                                                                                                21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IMPORTANT: This sequence is not the entire insert of clone RP11-205M20 It may be shorter because we sequence overlapping sections only once, except for a short overlap. The true right end of clone RP11-205M20 is at 155585 in this sequence. The true left end of clone RP11-555J4 is at 84490 in this sequence. The true right end of clone RP11-334P12 is at 2000 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr9
RP11-205M20 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   requests: clonerequest@sanger.ac.uk

On Oct 21, 2001 this sequence version replaced gi:15021313.

During sequence assembly data is compared from overlapping clones where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (19-OCT-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
